

GOVIND ROSHAN BELLARY

(484) 639 8630 | roshangovind96@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Senior Developer with extensive Unreal Engine 4/5 and C++ expertise with a proven track record in designing and shipping diverse gaming experiences. Adept at developing and debugging production-grade systems, including real-time UI tools and multiplayer architectures. Experienced in optimizing performance and collaborating with cross-disciplinary teams to create immersive gameplay experiences, with a strong background in Unreal Engine and sensor-integrated projects.

SKILLS

- **Programming Languages & Tools:** C++, C#, Python, GitHub, SourceTree, Jira, Shortcut, Slack (to name a few of many!)
- **Game Engines & Development:** Unreal Engine 4, Unreal Engine 5, Unity, Godot, PC development, Real-time multiplayer games
- **Game Design & Architecture:** UX/UI systems, Game Architecture, Game Design
- **Concepts & Methodologies:** OOP, Data Structures, Algorithms, Agile Systems

WORK EXPERIENCE

Create Neptune

Sep 2022 - Present

Senior Developer

Dallas, TX

- Designed and shipped 10+ modular, PC and mobile friendly games across educational and casual genres, integrating responsive UX/UI considerations and leveraging blueprint expertise on Unreal 5.
- Directed multiplayer architecture for a PvP boxing game with rollback netcode and real-time synchronization, as well as turn-based game for platforms including tabletop screens, mobile devices, and PC on Unreal 4.
- Engineered sensor-integrated experiences, such as Skylar's Run, by incorporating real-time EEG input over Bluetooth into gameplay.
- Built a Trie-powered hint system in Scrabble Vision to suggest valid words in real-time, enabling <5ms lookup from a full dictionary.
- Implemented OpenCV-based computer vision in real-time gaming using CLAHE, bilateral filtering, and adaptive thresholding with native C++ for enhanced performance on Android devices.
- Optimized rendering performance using Profiler Tool, RenderDoc, memory pooling, LODs, and texture pipelines on constrained devices, resulting in smoother UI, faster data loads on game screens, and improved user experience.

Create Neptune

Jun 2021 - Aug 2021

Game Programmer

Boston, MA

- Developed procedurally generated mountains using Perlin noise and priority queues to shape and animate peaks with live height data, enhancing visual realism and player immersion. I led development for this project on Unity for iOS, Android and WebGL.

Butlr Technologies

Sep 2021 - Jan 2022

Software Engineer Intern

Burlingame, CA

- Implemented a timeline feature to visualize historical movement of individuals and optimized line rendering through circular buffers and time-binned position averaging, balancing clarity and performance. Technology stack used for this project was Unity engine.

Northeastern University

Jan 2021 - Jul 2022

Graduate Research and Teaching Assistant

Boston, MA

- Led development of an AR Hololens app for training industry workers using object tracking libraries (VisionLib & MRTK), enhancing training efficiency and accuracy. The technology stack used here was Unreal Engine 4 and Microsoft Hololens.

Gameshastra

Nov 2018 - Aug 2020

Junior Developer

Hyderabad, India

- Engineered UI and network features for titles such as Hungama Games's Cricket Lite, JamCity's Vineyard Valley, and IGT's Casino Games, enhancing gameplay experience and stability. These games were built on Unreal Engine 4 and Unity3D (JamCity and IGT).

Milople Technologies

Jan 2018 - Sep 2018

Software Engineer

Gujarat, India

- Developed an AR app on Unity that detected flat surfaces and accurately placed furniture models, enhancing user interaction with scaling, rotation, and positioning features. This application was built out on Unity3D for iOS and Android.

PROJECTS

2D Game Engine with SDL2

Jan 2022

- Built a lightweight, modular C++ framework built on SDL2 that handles windowing, rendering, input, resource management, and a fixed-timestep game loop out of the box, a scene manager, and integrated level editor for free-form environment placement.
- [Developed 3 games](#) along with level editors ([Tower Defense](#), [2D Platformer](#), [Breakout](#)) on my Game Engine.

3D Graphics Engine

Jan 2022

- Built out a 3D rendering Graphics Engine with support for Bezier Curves, lighting, matrix operations and more in C.

Hierarchical Modeling System

Dec 2021

- Built a 3D rendering system in C, including algorithms to Floodfill the screen, Scanline and Z buffer rendering.

EDUCATION

Northeastern University

Sep 2020 - Aug 2022

MSCS, spec. in Artificial Intelligence

ICFAI University

Aug 2014 - Aug 2018

B.Tech, Computer Science Engineering
